DETAILED ACTION

1. Claims 1-2, 5-8, 10-11, 15-18, 21-23, 25-27, 30-33, 36-38, 40-42, 45-46 are currently pending in this application.

Double Patenting

2. Claims 1-46 are provisionally rejected under the judicially created doctrine of double patenting over claims 1-33 of copending Application No. 09/929,031. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: the instant application and copending application claimed a communication network, adapted for use with mobile wireless user terminals. The system and method of the present invention comprises the same subject matters as in the copending Application No. 09/929,031.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

said user terminals and said access points, and each said access point being adapted to update its address resolution protocol cache with an Internet protocol address of a said user terminal when that said user terminal becomes affiliated with said access point, and being further adapted to issue an address resolution protocol request which causes other said access points to update their respective address resolution protocol cache to indicate that a user terminal has changed its affiliation to said access point (column 18, lines 19-26, column 27, lines 45-67, column 28, lines 1-67, column 29, lines 1-67, column 30, lines 1-67, figure 9 and 17).
